

Amendments To The Specification:

Please amend the specification at page 5, lines 3-8 as follows:

The receptacle, which eventually holds the marker, may take a variety of forms and shapes and be made of any shape memory or super elastic alloy which is suitable for implantable medical devices. A circular shape is shown in the accompanying illustrations, although the receptacle can have any shape, including shapes with corners and multiple sides. However, the receptacle must merely comprise sufficient inner surfaces so as to, when contracted, adequately constrict around and hold the marker.
